

# INCIDENT COMMAND SYSTEM

# Response Simulator

## Training Solutions

Response Simulator (RS) is a brand-new virtual training platform built in collaboration with safety and security experts. By using state-of-the-art technology RS immerses users in a realistic 3D environment in which almost any scenario can be simulated. This allows training to take place whenever and wherever, bypassing the high costs and dangers associated with practical training.

## Benefits

- **Enhanced capabilities** - Create detailed scenarios using a range of powerful and easy-to-use creation tools.
- **Modular Solutions** - Choose functionality and content to suit your sector and training goals.
- **User Centric Design** - Simple, intuitive interface allows non-technical users to quickly learn and operate RS.

The  
**3-step process**  
to world-class virtual training

# Incident Command

The Incident Command system within the RS platform allows incident commanders to experience emergency situations and practice response strategies. It prepares trainees to make the right decisions in the heat of the moment. The system consists of three different content packages catering to the specific needs of different industries and includes libraries of 3D environments and objects. Training can be conducted in various configurations depending on predefined training goals.

## Configurations

Incident Command training is available in the following configurations:

### One-On-One Training

One instructor trains an individual trainee, preparing individuals for a specific role during an incident.

### Classroom Training

One trainee takes the lead while others assist and discuss which decisions need to be taken.

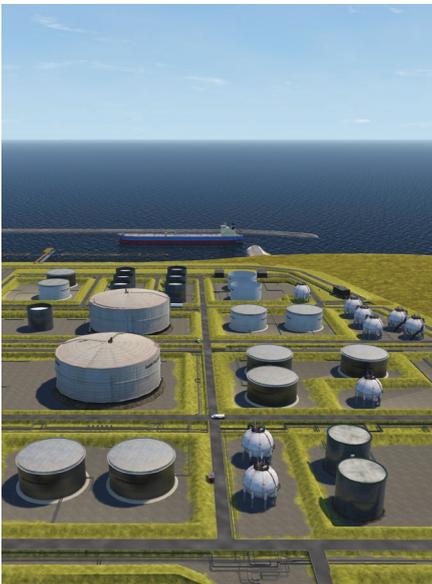

### Multi-User Training

One instructor and multiple trainees interact simultaneously in a scenario.

## Content Packages

RS comes with a broad range of base content that can be used to create any kind of training scenario. Three industry specific content packages are available in addition to the base content.

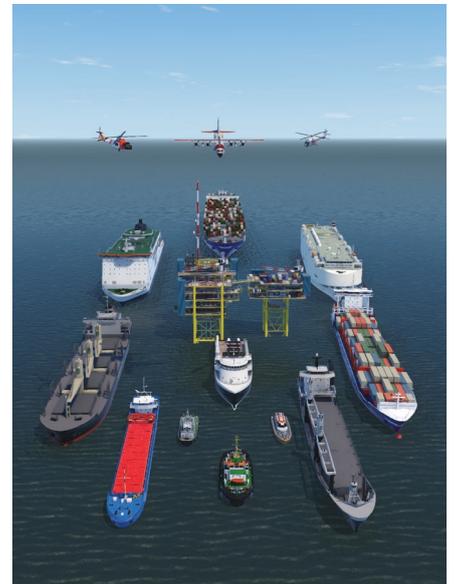

### Industrial

### Aviation

### Maritime

## Custom Content

RS can also accommodate custom environments, vehicles, characters and objects. Custom content can be tailored to your specifications; This allows training to take place in real-world locations, with virtual vehicles, characters and objects precisely mirroring those available in reality.

## About

Response Simulator is a product of virtual training and simulation developer VSTEP Simulation, an ISO9001:2015 certified company based in Rotterdam, the Netherlands. We aim to train people for a safer world through the use of advanced products that serve existing markets as well as new markets not yet familiar with the benefits of simulation. Our six leading product development principles are all geared towards optimally satisfying our users. We strive for transparency, quality, reality, efficiency, flexibility and versatility. By listening to our users, we create products that are built to optimally cater to their unique needs.
