RS Creator

Training Applications

Using RS Creator for incident re-creation provides enhanced awareness and insights into complex situations. Through discussion and evolving incidents, you can teach your trainees response strategies to unexpected developments.

After creating an incident, you can practice resource placement strategies and view incidents from any vantage point. The system grants you access to tools that help form a solid basis for entry into virtual safety training.

Suitable for training:

- Incident and Environment Familiarisation
- Resource Placement
- Tabletop Training
- Response Strategies
- Hazard Recognition
- Incident Storytelling
- **And more...**

Creator tools

Users can train for incidents in urbanised city centres, residential areas, highways, tunnels and more within the RS generic environment. A wide variety of objects, characters and vehicles will allow you to visualise anything you desire.

Additional packages

If necessary, the option is available to purchase additional packages that best fit your training goals:

Aviation
- Includes an airport and aviation-based content.

Maritime
- Includes a loading terminal and maritime-based content.
